Dear Hiring Manager,

I am excited to apply for the SOC Analyst position. I have 3.4 years of experience in Security Operations, with hands-on experience in security monitoring, incident response, threat hunting, malware analysis, phishing investigations, vulnerability management, and detection engineering.

I have worked with tools such as FortiSIEM, Splunk, ArcSight, SentinelOne, Elastic Defend, and Cortex XSOAR. I have a background investigating security alerts, handling incidents from initial triage to remediation, improving detection rules, analysing threats, and supporting daily SOC operations. I have also worked with the MITRE ATT&CK framework for understanding and analysing attacker techniques.

I am passionate about cybersecurity, and I enjoy learning new things. During my career break, I continued working on my skills through TryHackMe, Hack The Box, CTFs, security labs, technical research, blogging, and automation projects. Even though I was away from a full-time job, I did not stop learning or practising cybersecurity.

My return to the workforce has been challenging due to personal health circumstances and recovery. I also faced several setbacks during recruitment and medical screening, even after clearing multiple interviews. It was difficult at times, but I did not give up. I continued improving my technical skills and kept looking for the right opportunity.

I am now stable and recovering, and I am ready to restart my professional career. This journey has made me more patient, resilient, and determined. I am not looking for sympathy or special consideration. I am simply looking for one genuine opportunity to prove myself through my work.

I believe my previous SOC experience, practical skills, willingness to learn, and determination will help me contribute positively to your team. I would be grateful for the opportunity to discuss my experience and how I can contribute to your organisation's security operations.

Thank you for taking the time to consider my application.

Sincerely,
