Dear Hiring Manager,

I am writing to apply for the **SOC Analyst** position at your organization. I have **3.3 years of enterprise SOC experience** in security monitoring, threat detection, threat hunting, and incident response. During my previous role, I supported security operations for **12 SIEM customers and 34 EDR customers** across SIEM, EDR, endpoint, network, and email security environments.

My experience includes **alert triage, incident investigation, log correlation, IOC analysis, threat hunting, detection rule tuning, malware and phishing investigation, containment, remediation, recovery, and root cause analysis**. I have worked with technologies including **FortiSIEM, ArcSight, Splunk, Elastic, SentinelOne, Cortex XSOAR, Wireshark, Zeek, Nessus, and DFIR tools**.

I also maintain an active hands-on approach to cybersecurity through **TryHackMe, Hack The Box, CTFs, security labs, technical research, and security write-ups**. I have completed **506+ TryHackMe rooms**, achieved a **#235 India / #1,975 global rank**, and hold a **#1,044 global rank on Hack The Box**. I have also published **30+ technical security write-ups** and worked on **100+ security projects and code contributions**.

I am looking for an opportunity where I can apply my SOC experience while continuing to develop my skills in **threat detection, threat hunting, incident response, and defensive security operations**. I would appreciate the opportunity to discuss how my experience could contribute to your security team.

Thank you for considering my application. I look forward to hearing from you.

.

Sincerely,
Kiran Dikshit Menon A
